

# Loss Bulletin

## Vero Engineering Insurance

### Damage to electronic equipment in a Radio studio.

#### Loss details

##### **Nature of business**

Community  
Radio Station

##### **Type of equipment**

Damage to 2 x PC's  
and a Control Panel

##### **Age of equipment**

3 Years Old

The repairer had found that the power supply regulator had failed allowing high voltage to damage a number of integrated circuits within the control panel and two PC's.

The repairer had suspected a power surge, however there were no storms in the area at the time and no indication of a general power outage.

Repairing of the 18 year old control panel was hindered as the radio technician who originally built the system had since become visually impaired and was therefore unable to rebuild the control panel and some component parts were no longer available.

Consequently Vero repaired the Power supply and fully replaced the control board.
